BACK-UP JERK BUFFER

In order to prevent the jerk of clutch, due to a sudden rocking of engine/gearbox unit when backing up, a buffer, P.N. 105.06.13.816.00, is fitted to the Giulia 1300 model on assembly line.

In the event a similar trouble is experienced in the clutch of other Giulia models, it is recommended to fit the buffer as shown in the illustration below.

Care should be taken not to set the buffer under excessive pre-load as this may give raise to undue noise.
